Product update

What's new at Alertsify.

Everything we shipped to members over the last four weeks: charts, trading, copy trading, analytics, leaderboards and the Marketplace.

Inside

01 **Faster everywhere** — Speed, measured before and after — 03

02 **Less than a second** — Copy trading, from their fill to yours — 04

03 **Charts, now open to every member** — Indicators, chart types, heatmap and alerts — 05

04 **Copy trading, set up right** — Rules, sizing and risk — 07

05 **Oct 29 to Nov 4** — Week 1 · 57 updates — 08

06 **Oct 22 to Oct 28** — Week 2 · 71 updates — 10

07 **Oct 15 to Oct 21** — Week 3 · 45 updates — 13

08 **Oct 7 to Oct 14** — Week 4 · 10 updates — 15

183 updates shipped

4 weeks

36 new chart indicators

Faster everywhere.

Copy trades reach your broker in less than a second. Over these four weeks we went after every place the app could feel slow. Here is what changed, measured before and after.

25×	**Chart stop orders** From the price crossing your stop to the sell order going out. Detecting the cross alone went from 4,188 ms to 4 ms.	~~4.8 s~~ → **188 ms**
38×	**Typing a new ticker** From typing a symbol to its candles on screen. Charts you've opened before draw at once, with the live price.	~~1,060 ms~~ → **28 ms**
39×	**Live ticks on deep history** Frame time with 40,000 bars loaded and live ticks arriving. 16.8 ms is one frame at 60 fps: no stutter.	~~650 ms~~ → **16.8 ms**
22×	**1-minute chart with Gamma levels** Panning and crosshair frame time. Live ticks on the same chart: 400 ms to 33 ms.	~~367 ms~~ → **16.8 ms**
12×	**Charts running custom scripts** Slowest live tick on a 1-minute chart. Script work over a session: 33.5 s down to 1.8 s.	~~400 ms~~ → **33 ms**
9×	**Second-based charts** Time to the first 15-second candles. 1-second charts: 0.35 s to 0.08 s.	~~2.6 s~~ → **0.28 s**
1.9×	**Marketplace scripts** Time to run every published script. The slowest scripts got up to 8× faster.	~~149.8 s~~ → **78.9 s**
Instant	**Why it's moving** Time to the first answer for a new ticker. Headlines, earnings and market context show right away. The written summary follows.	~~15 s~~ → **instant**

Measured in our own test setup, before and after each change, on the same data. Your times depend on your device, connection and broker.

Copy trading

<1s

Your trader trades.
Your account follows.

From the lead trader's fill at their broker to the order at yours, sized to your settings.

Highlights

Charts, now open to every member.

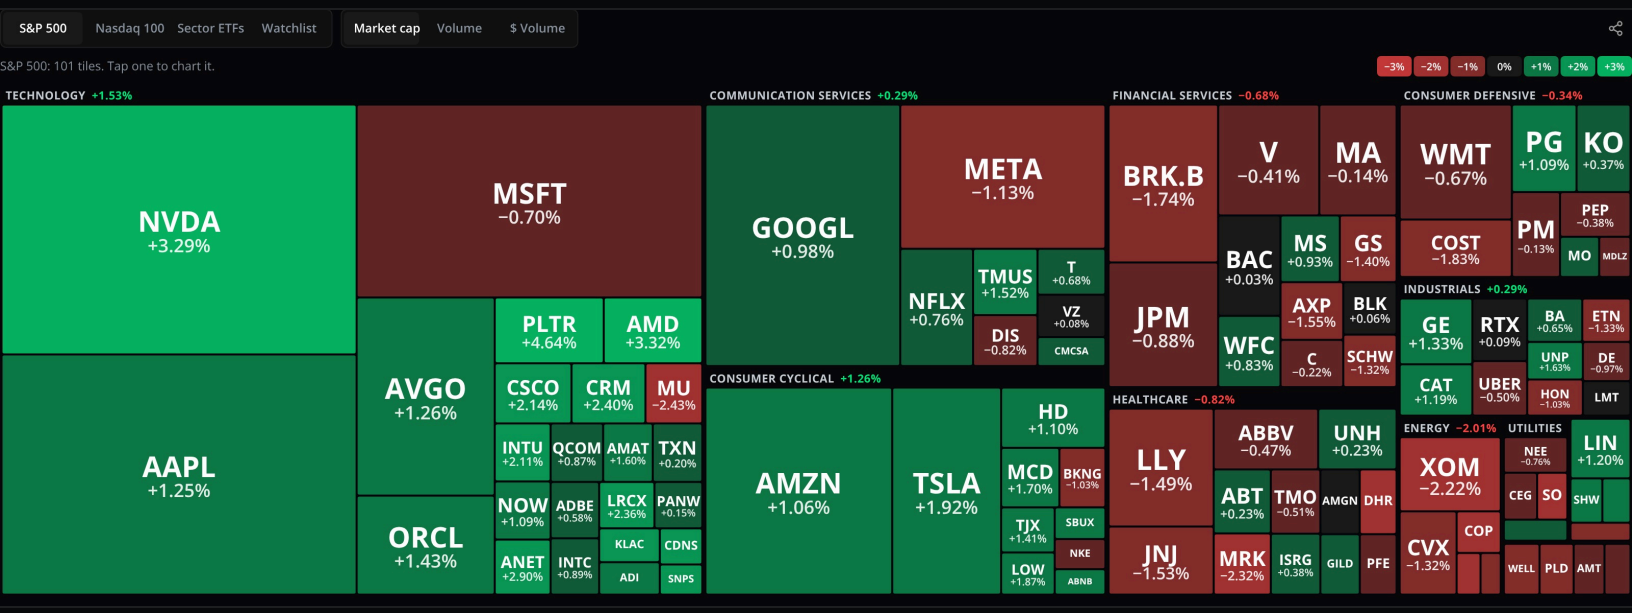

36 more indicators

Including CCI, MFI, Williams %R, Hull MA, VWMA, Zig Zag and Aroon. Up to 50 on one chart, and stack one on another, like an SMA of RSI.

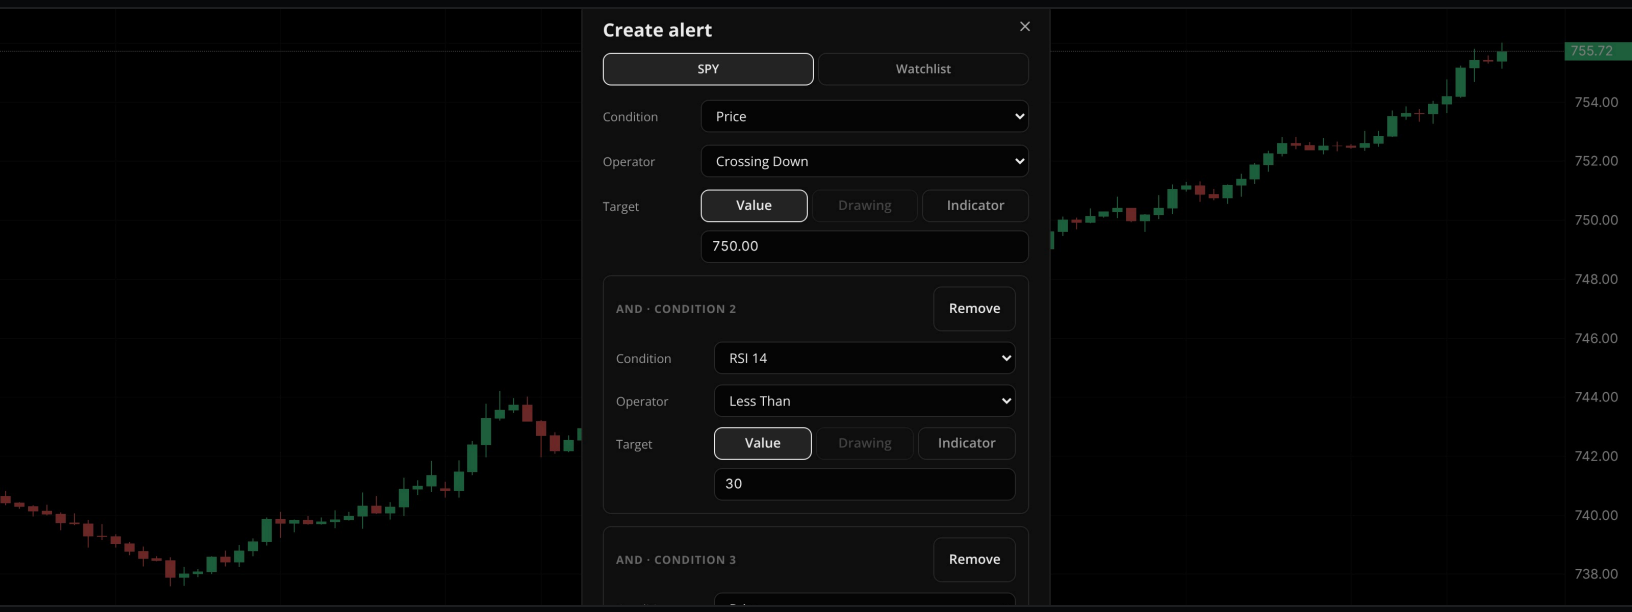

New chart types

Volume candles, Renko, Line break, Kagi, Point & figure, Range bars and TPO / Market Profile. Second-based and tick charts too.

Market heatmap

The S&P 500, Nasdaq 100, sectors or your watchlist, on Charts and as a Scanners tab.

Alerts with up to 5 conditions

Alerts on any drawing, "Moving up/down %" alerts, and delivery to Discord, X or a custom webhook.

Highlights

Copy trading, set up right.

Better sizing, clearer rules and more brokers, so the copies that reach your account match what you signed up for.

01

Copy rules

Lead traders publish up to 10 rules (brokers, account type, minimum balance, size, order type), and each one is checked against your own setup before you subscribe.

02

Suggested settings

We replay a copy trader's history to suggest a size in every sizing mode at each risk level, plus up to two risk rules. Apply them in one tap.

03

Seven risk rules, for every member

Blocked trading hours, Pause on Fed days, Max manual trades per day, Skip lottery tickets, Pause around earnings, Cool-down after a loss, and Lock in winners.

04

Copy trading into Interactive Brokers

Approve each copy in IBKR, or copy hands-free with Autonomous mode.

05

Settings check

One sheet in the account menu flags anything stopping your copies, with a one-tap fix for each.

06

Find your fit

Rank every copy trader for your account size.

07

Copy routing PRO

Send a trader's copies to a different account than the one you trade with.

08

Missed copies card

What the copies that didn't go through would have made or lost, and why.

Week 1 of 4

Oct 29 to Nov 4

57 updates

Charts: a big batch, now open to every member (Nov 2)

20

36 more built-in indicators, including CCI, MFI, Williams %R, Hull MA, VWMA, Zig Zag and Aroon

Up to 50 indicators on one chart (was 16)

Stack one indicator on another, for example an SMA of RSI

TPO / Market Profile

New chart types: Volume candles, Renko, Line break, Kagi, Point & figure and Range bars

Second-based timeframes (1s to 30s, or custom), now with real history

Tick charts for CME futures (100T to 2000T, or custom)

Spread and formula symbols such as AAPL/MSFT, SPY-QQQ and ES1!-NQ1!

Up to 40,000 bars of history on desktop

New drawing tools: Fib and Gann sets, harmonic patterns, Elliott waves, ranges, notes, and fixed-range and anchored volume profile

Editable Fib levels (ratios and colors), saved as your default

Object tree, Data window, and undo/redo for drawings

Alerts with up to 5 conditions, alerts on any drawing, and "Moving up/down %" alerts

Multiple named watchlists, each with its own alerts

Market heatmap (S&P 500, Nasdaq 100, sectors or your watchlist) on Charts and as a Scanners tab

Tidier widgets: 13 merged into 7 tabbed ones

Stops that wait for a candle close, and from Nov 4 stops that follow an indicator such as VWAP, an EMA or Supertrend

Practice trading during bar replay, with an end-of-session summary you can share

Snapshot links you can share to X and Discord

Export chart data and indicator values to CSV

More on Charts

15

Resizable indicator panes: drag the divider or use the arrow keys

One action removes drawings and indicators from every chart

Every stop, target and buy line has a labelled pill with a quick × to remove it

Flatten and Close all now ask you to confirm

Large Order Check: switch it off or set your own threshold

Scripts run faster and off the main thread; a slow script tells you which lines cost the most

Script alerts can send your own custom JSON to a webhook

Ready-made GEX indicators (levels, regime, net gamma, wall shifts), plus Expected move and IV indicators that need no code

SPX, NDX and RUT charts show volume

Deeper, more reliable futures history, with correct front-month rolls

Full history on option contract charts for every past day

Footprint history for past futures sessions

More on Charts continued

"Why it's moving" answers faster and is ready ahead of time for your watchlist

Switching ticker or timeframe is near-instant, and the newest candle streams live

Desktop app: chart windows reopen where you left them, and you can save and reopen named layouts

Trading and risk 6

Seven risk rules open to every member: Blocked trading hours, Pause on Fed days, Max manual trades per day, Skip lottery tickets, Pause around earnings, Cool-down after a loss, and Lock in winners

A Remove stop button that cancels a stop on every account in the position

A just-placed order shows under Working within seconds

The Mine / Copied filter splits positions you partly bought and partly copied ("2 of 4")

Signal cards show your copy size next to the lead's ("You 12 · Lead 10")

Safer Close all: Cancel is focused, and it asks again if your positions changed while the dialog was open

Copy trading 4

Copy rules: lead traders publish up to 10 rules (brokers, account type, minimum balance, size, order type), and each one is checked against your own setup before you subscribe

Discord roles: leads connect their own server, and subscribers claim their roles straight from Alertsify

Get a notification when a trader you copy goes offline, and again when they're back

"% Account" sizing now uses your account value, not margin buying power

Leaderboard and analytics 5

Suggested settings on every copy trader: we replay the trader's history to suggest a size in every sizing mode at each risk level, plus up to two risk rules. Apply them in one tap

Find your fit: rank every copy trader for your account size

Share cards: "Show on the card" toggles let you hide figures such as P&L %

Clearer account names in the Analytics picker (broker plus account)

Open "Slippage vs the leader" for a specific trader you copy

Marketplace 3

A create, test, publish flow for indicators, with a "Tested on your chart" badge

My indicators follow your account across devices

Presets and example descriptions in "Describe it", which also knows the options-data functions (GEX, IV, flow)

Elsewhere 4

Alert Builder can ping a chosen Discord role, not only @everyone or @here

Help now goes straight to our Discord support channel

Invite pages open with a live chart showcase

Home: the "at your size" card is one compact line, and dismissing it snoozes it for 7 days

Week 2 of 4

Oct 22 to Oct 28

71 updates

Charts 33

Focus mode: one click (or Shift+Z) hides everything but the chart. A slim side rail brings back the ticket, widgets and orders

Focus and full screen also hide the top navigation

New members start on a clean chart

Linked multi-chart groups: charts in a group share a ticker but keep their own timeframes

Multi-chart grids switch cells instantly and keep each cell's zoom and scale

Pop out up to 6 chart windows

Chart settings reorganized into searchable tabs

Price-scale menu (Auto, Invert, Percent, Indexed to 100, Log), a time-zone clock, and an RTH/ETH switch

Personalize your chart: your own logo or background, your @handle, and text size and line thickness

Lead traders can put their approved logo on subscribers' charts

Looks per ticker: a saved template applies itself to a symbol or a grid pane

Templates remember which layers are on and can be renamed

Indicators can show on chosen timeframes only (for example a 21 EMA on the daily chart)

Moving averages from another timeframe (a 15-minute 9 EMA on a 1-minute chart)

Drawing settings dialog, drawing templates, copy and paste for drawings, and % from last price on horizontal lines

Paste or drop images onto the chart

Footprint upgrades: heat view, cleaner imbalances, split bid|ask, and a custom POC color

Option contract charts with 1-minute candles, plus volume, open interest and IV history

Futures GEX: SPX and NDX gamma levels mapped onto ES/MES and NQ/MNQ

Scripts can read options flow, GEX, IV and dark pool data

Price alerts delivered to Discord, X or a custom webhook

Sounds for more events (alert triggered, order rejected and more)

Customizable watchlist columns, with CSV export and import; Alt+W adds the current symbol

Economic calendar adds Fed press conferences and official release schedules

Charts continued

"Why it's moving" now includes X posts from verified accounts and earnings reports

Replay from a chosen start: today, yesterday, a date or a picked candle

Trailing stops (by %, by $ or by the daily range) and automatic stop-to-break-even. They run on our servers, so they keep working with the page closed

A Stop column in the positions tray, with one-click "Set break-even"

Set only a stop or only a take profit on a held position

The Orders tab shows your real working broker orders on every account, with Cancel; Free members get the Orders tab too

Sharper snapshots, and Share to X posts the full-size image

Chart links can open on the exact entry candle of a trade

Guided Charts tour for first-time visitors

Trading and risk 11

Protective stops at break-even or an exact dollar price, and move a stop in one tap

"Low of day" stops for shares, with a buffer you choose

Options spreads with Simple and Pro builders, live leg prices, hold-to-buy, a payoff chart and Open/Closed spread lists BETA

Interactive Brokers direct trading from the Trade page and Charts: approve in IBKR or go hands-free with Autonomous mode

Webull, Vanquish and IBKR holdings show on the Positions tab

"Turn Off Options Trading" switch: blocks new option entries, including copies

Large-order check before a buy of 100+ contracts

Your own buys fill exactly the size on the ticket

Grouped Risk Rules and a refreshed look for all trading controls

"What applies to <Trader>'s copies" on each trader's sizing row

The Working tab lists chart stops we watch for you, grouped by ticker, with Cancel all

Copy trading 6

Settings check in the account menu: one sheet that flags anything stopping your copies, with a one-tap fix for each, and a red dot when something needs attention

Copy trading into Interactive Brokers: approve each copy in IBKR, or copy hands-free with Autonomous mode

Copy routing PRO**:** send a trader's copies to a different account than the one you trade with

Trade once, fill every account PRO**:** results from each account reach your notifications, including the broker's reason for a refusal

Copy stop losses work on directly connected Robinhood accounts

Clearer skip messages when a % size rounds to 0 contracts

Analytics 7

Custom date range on Analytics; every tile and chart follows it

Discipline tab: set your trading rules, get a daily score, and see what your discipline is worth

Share cards overhaul: Best day, correct stats, calendar cards that match the page

Clearer buying-power message on the Missed tab

Journal tags: tag trades, filter by tag, and see P&L by tag

Spreads read as spreads in the Journal, including Robinhood spreads

"Your exits vs your trader's" comparisons are more accurate

Leaderboard and profiles 5

Copy traders are ranked only on the trades they sent to subscribers

Subscribe buttons show any one-time join fee next to the monthly price

Calendar popovers name contracts readably ("SPCX 145P 11/06/26")

Faster public leaderboard: top 10 with Show all

The Broadcasted badge shows on stock trades as well as options

Profile, Home and Marketplace 9

New Alerts hub: Trade alerts, Price level alerts and Connected accounts in one tab

The Home portfolio card follows the account you pick

Lead traders' chart looks are listed in the Marketplace

Strategies tab: member strategies and starters, each with a standard SPY backtest

Redesigned verified stats page

Guided setup after checkout: connect a broker, pick a trader, set limits and turn copying on, or take the chart tour and practice in the Simulator

Any member can now sell an indicator; Free sellers can set up payouts

Chart styles tab with Look only / With indicators filters

Scripts up to 500,000 characters

Week 3 of 4

Oct 15 to Oct 21

45 updates

Charts

24

"Why it's moving" widget: the live move, the likely reason, the headlines behind it, and context from earnings and the broad market

Market calendar with economic releases (with actuals), earnings and IPOs

The Buy button names the price it will use, for example "Buy 42 @ 0.70 Bid"

Footprint chart type for futures, with open interest, volume and settle beside the price

Load 5K, 10K or 20K bars of history

Watchlist holds up to 100 symbols (was 30)

Tap a flow, mover or winner row and the trade is marked on the stock's candles

The next earnings date always shows, in words

Hide any trader's plan from your chart in one click

Realized P&L column on the chart Positions tab

Mouse-wheel zoom speed setting, and wheel zoom on the price scale

Strike chips reach further out of the money

"Overnight vs Day" widget: compare holding overnight, intraday or straight through, plus best hour of day, weekday, earnings, gap and seasonality studies, and a Backtest tab for your own buy/sell rules

Order templates: save a stop and an optional take-profit that arm as soon as your buy is accepted

"Market closed · opens in ..." on the ticket when the market is shut

Index charts (SPX, VIX, NDX, RUT, XSP) draw candles

Open charts in several separate windows

Market levels redesign: clean call wall, put wall and gamma flip lines, a GEX map widget, and live "NOW" banners when a wall moves

Redesigned desktop chart header in two tidy rows

Congress trades get their own layer switch, with readable labels

All / Mine / Copied filter on the Positions tab

Heavier Pine scripts run (multi-symbol and multi-timeframe), and script tables can sit anywhere on the chart

Stop and target % measure from the mid when the spread is wide

A phone Tools menu that puts every market panel one tap away

Trading

5

Risk rules grouped by what they do (when to stop, how big, which contracts, orders and exits), with a search box

"DAY P&L" column, and protective stops accept a typed %

"This trader made me..." share card on the Copy Trading tab

Easier-to-read position rows, with a full-width Sell button on phones

Multi-account routing PRO: every position row shows what each routed account holds, with live P&L, and chart orders and stops reach every routed account at its own size

Analytics 5

On copied trades, the Journal shows the trader's entry and exit next to yours, plus a "You vs <trader>" card

Heatmap: one column per real hour, and tap a tile to list its trades

Trade notes show their screenshot full width

Unfilled limit orders count as missed copies, with a plain reason

Analytics remembers the date range you last picked

Leaderboard and profiles 8

"Settings that would have worked" card in the trader popup

Monthly P&L on your profile switches between All, Own and Copied, with a shareable image

My P&L simulator: proportional sizing up to 1,000%

One Earnings tab for payouts, copy trading earnings and Marketplace sales

Refreshed Find your fit, which remembers your timeframe

Lead traders can offer an annual plan, with a Monthly / Annual switch at checkout

Private profile switch for every member

Lead traders can add a one-time join fee

Marketplace 2

Beyond indicators: chart templates, fill-sound packs, color themes and multi-chart layouts, each applied in one tap

A Marketplace button on the chart toolbar

Everywhere 1

Faster page loads across the app, a faster Trade tab and Profile, and smoother charts and flow tape

Week 4 of 4

Oct 7 to Oct 14

10 updates

Highlights

10

Scanner widget on the chart: Flow, Movers, Winners and Congress lists, where a tap charts the ticker

Custom fill sounds: pick a chime, upload your own clip or set spoken words, with volume per event

When your own risk rule blocks a buy, the message gives you a one-tap fix

Full-history headlines in the News tab

Missed copies card: what the copies that didn't go through would have made or lost, and why

Chart tabs follow your watchlist sections, opening each one as a grid of charts

Buy card can show volume and open interest; Trim buttons show percent and contracts ("Trim 25% · 26")

Watchlist Ext column for after-hours moves

A Risk button in full screen

Copied stock buys can have their own max-buys limit, separate from options

ALERTSIFY

Copy trading for options and stocks.

A trader you follow places a trade at their broker. It lands in your own brokerage account in less than a second, sized to your settings.

alertsify.com

Alertsify is a self-directed software tool and is not a registered investment adviser or broker-dealer. Trader subscriptions are sold separately, and Alertsify does not recommend traders. Past performance does not guarantee future results. All trading involves risk. Features marked PRO require a Pro plan; features marked BETA may change.
